Initial display :

Home page display :

On this page, you have 3 navigation buttons:

Settings, job list and finally the home page.

On the home page, there are two buttons, one for the user manual and the second for the release notes..

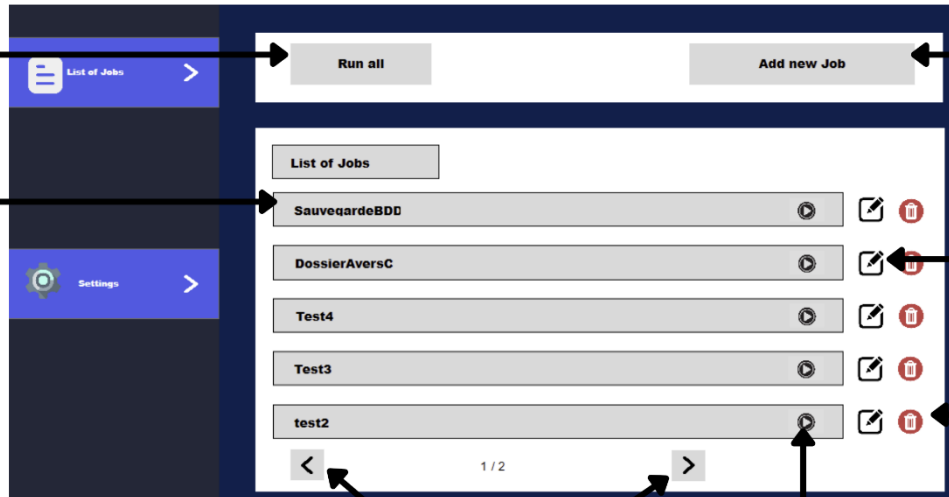

Job list display

In this section, we have the job list and an interactive display showing the last five jobs added. In this interface, you can launch all the jobs saved in the software. On the other button, you can add a job.

List of Jobs

Button launches all saved programs

Job display register

Button leading to the backup job creation area

Button leading to the editing area of a backup job

Button to delete backup job

Page navigation button

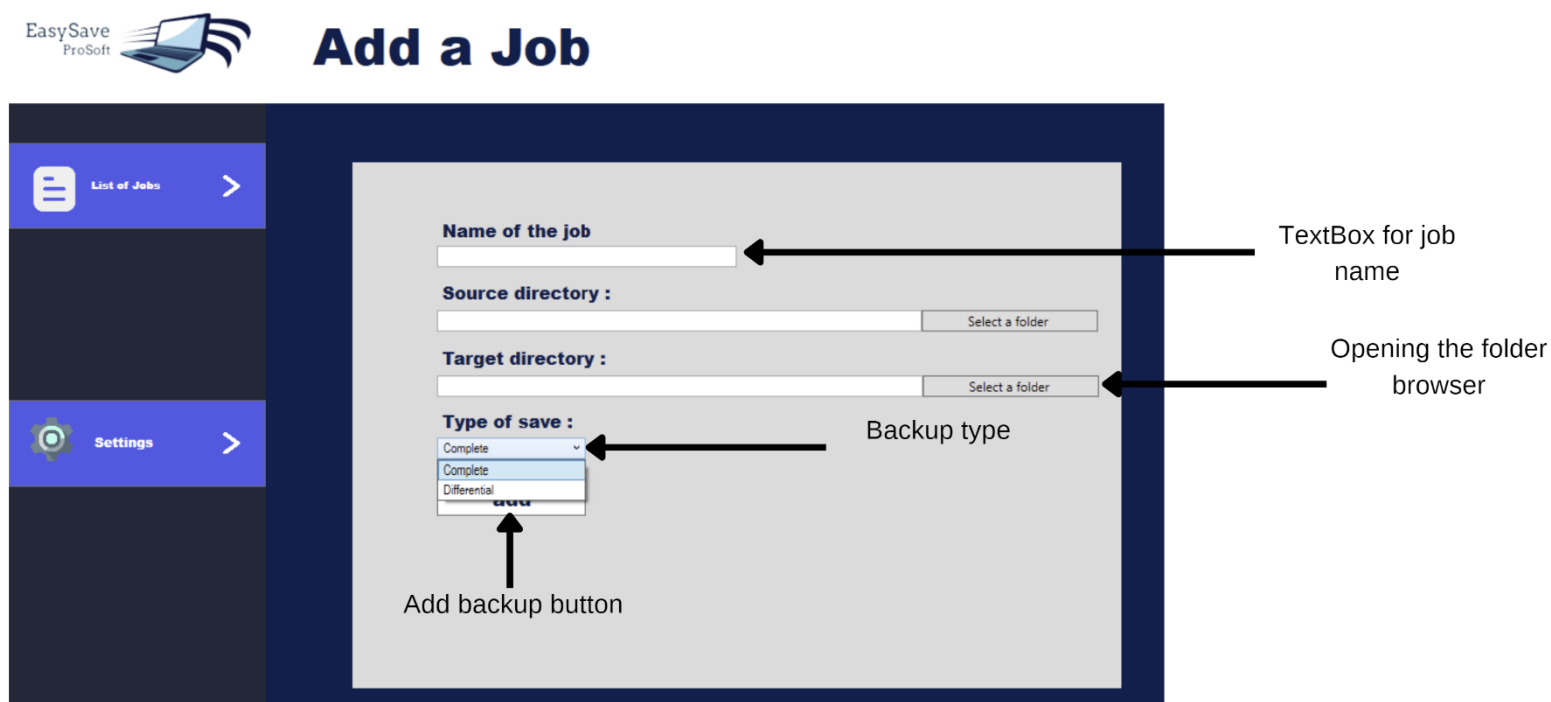

Button to starts the job

Moving on to the table, this gives us the option of launching jobs one by one. You can also edit and delete any job you wish. At the bottom of your interface, you'll find buttons that allow you to change job pages.

Adding a job

In this interface, we have 3 TextBoxes, the first for the job name.

The other two correspond to the source folder, i.e. the one that will be copied later. To select the source and target folders, you can click on the "Select a folder" button, which will open your "file browser".

This will make it easier for you to fill in the information.

Next, you'll be presented with a drop-down menu for choosing the save mode (Complete or Differential).

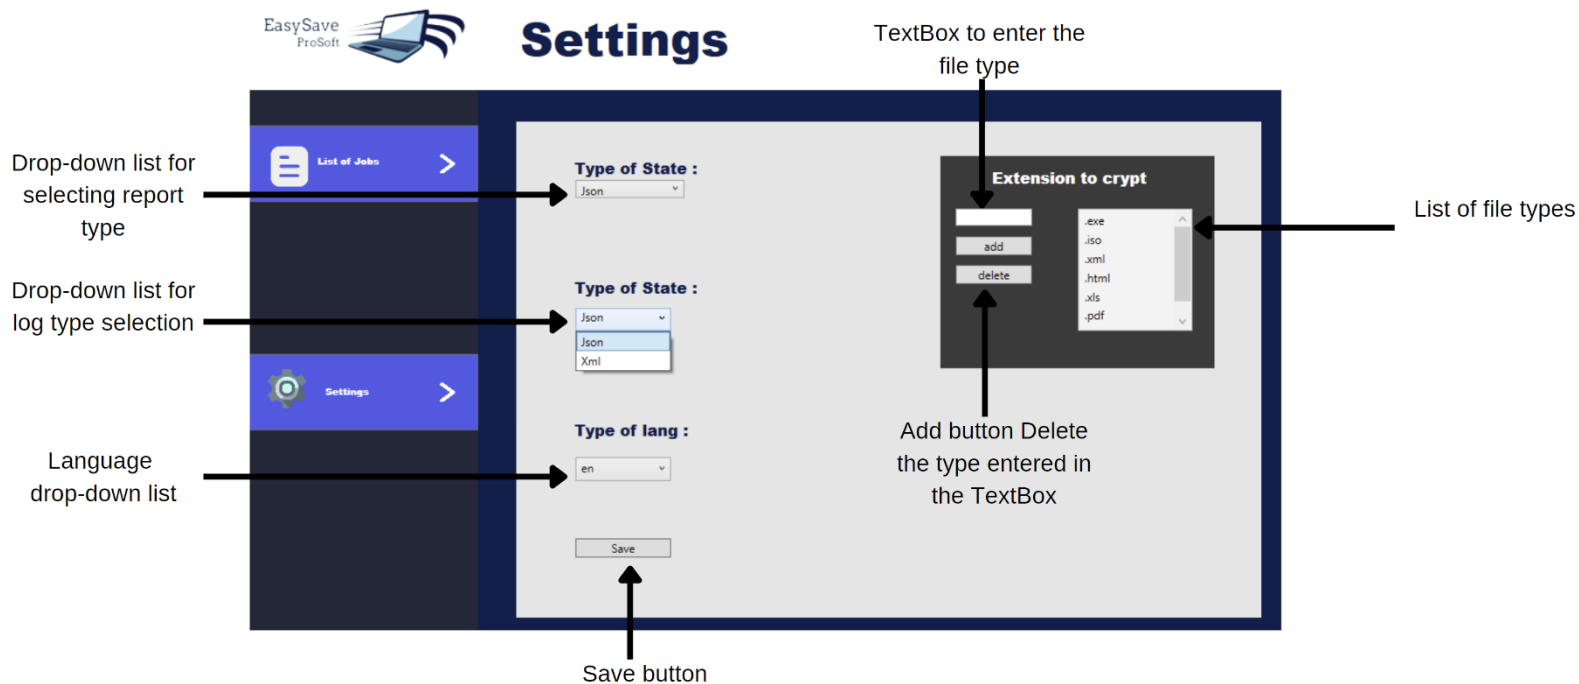

After that, the program will take you back to the Job List page.

Job modification

This corresponds to the same interface as adding a job.

Parameter

Here's the parameters interface, the display is divided into two parts, the first corresponding to the parameter for saving files, as you can see. There are two drop-down lists with a JSON or XML parameter for logs and reports. In the same column, we have the language modification. To save the information entered in the column, press the Save button.

For the second part of the display, you have a TextBox for entering the file types you wish to encrypt. Once you've filled in the TextBox, press the Add button and it will appear in the file type list. To delete a type, follow the same procedure, fill in the type you wish to delete and press the Delete button.
